

Case Study 2: Farmer event

Farming Equipment and Technology Fund 2025 Showcase Event, in partnership with Catchment Sensitive Farming and East Durham College. Funded by Northumbrian Water.

Brought together speakers from Wear Rivers Trust, Catchment Sensitive Farming and businesses supplying FETF eligible products to showcase agri-tech which can be used on farm to benefit both the environment and farm business.

The event included sessions on:

- How to apply for the Farming Equipment and Technology Fund 2025
- How these items will benefit your farm and the environment
- Hear from a farmer who's completed the grant process
- Showcase of equipment available through the scheme

The event brought together over 20 farmers who were interested in the grant to discuss and share knowledge. Demonstrated a wide variety of technology options available through the grant, such as drills and aerators, soil testing kit, livestock handling systems and weather stations.
